Experiment with different layouts and color schemes for an app. Collect user feedback on aesthetics and usability using

GIMP(GNU Image Manipulation Program (GIMP)

AIM:

The aim is to trial different app layouts and color schemes and evaluate user feedback on aesthetics and usability using GIMP.

PROCEDURE:

Tool Link: <https://www.gimp.org/> **Step**

1: Install GIMP

- Download and Install: Download GIMP from GIMP and install it on your computer. **Step 2:** Create a New Project
- Open GIMP:

- Launch the GIMP application.
- Create a New Canvas:
- Go to File -> New to create a new project.
- Set the dimensions for your app layout (e.g., 1080x1920 pixels for a standard mobile screen).

Step 3: Design the Base Layout

- Create the Base Layout:
- Use the Rectangle Select Tool to create sections for different parts of your app (e.g., header, content area, footer).
- Fill these sections with basic colors using the Bucket Fill Tool.

Example Output: A base layout with defined sections for header, content, and footer.

- Add UI Elements:
- Text Elements: Use the Text Tool to add text elements like headers, buttons, and labels.

- Interactive Elements: Use the Brush Tool or Shape Tools to draw buttons, input fields, and other interactive elements.

Example Output: A layout with labeled sections and basic UI elements.

- Organize Layers:

- Use layers to separate different UI elements. This allows you to easily modify or experiment with individual components.
- Name each layer according to its content (e.g., Header, Button1, InputField).

Step 4: Experiment with Color Schemes

- Create Color Variants:
- Duplicate Layout: Duplicate the base layout by right-clicking on the image tab and selecting Duplicate.
- Change Colors: Use the Bucket Fill Tool or Colorize Tool to change the colors of the UI elements in each duplicate.

Example Output: Multiple color variants of the same layout.

- Save each Variant:
- Save each color variant as a separate file (e.g., Layout1.png, Layout2.png, etc.).

-
- Go to File -> Export As and choose the file format (e.g., PNG).

Step 5: Collect User Feedback

Prepare a Feedback Form:

- Create Form: Create a feedback form using tools like Google Forms or Microsoft Forms.
- Include Questions: Include questions about the aesthetics and usability of each layout and color scheme.
- Share the Variants:
- Distribute Files: Share the image files of the different layouts and color schemes with your users.
- Provide Instructions: Provide clear instructions on how to view each variant and how to fill out the feedback form.
- Gather Feedback:
- Collect responses from users regarding their preferences and suggestions.

-
- Analyze the feedback to determine which layout and color scheme are most preferred. **Step 6:** Iterate and Refine
- Refine the Design:
- Based on the feedback, make necessary adjustments to the layout and color scheme.

Experiment with additional variations if needed.

- Final Testing:
- Conduct a final round of testing with the refined design to ensure usability and aesthetic satisfaction.

RESULT:

Hence different app layouts and color schemes and evaluate user feedback on aesthetics and usability using GIMP has been successfully executed.
